Snow and Ice Removal Procedures

The City of Bentonville Street Department is committed to making city streets as safe as possible during snow and ice events. Equipment utilized consists of six (6) Dump Trucks with plows and spreaders, five (5) one-ton trucks with plows and spreaders, one (1) motor road grader, five (5) salt brine trucks. The Street Department is responsible for maintaining 1,100 traffic lane miles of City streets. When possible, the clearing of streets will begin as snow accumulations approach two inches in depth.

Materials to be applied:

- Salt Brine – a treated salt is used as a pretreatment on bridges, overpasses, select intersections and roads with significant grades. When possible, applied prior to snow and ice accumulation.
- Sand/Salt mixture – applied by spreaders during and after an event to help with traction and the melting of the snow and ice.
- Straight Salt – applied by spreaders to promote melting of ice

Priority for the snow and ice removal from the streets is as follows:

- Bridges, overpasses and roads with steep hills such as Stonehenge Drive, Oakwood Avenue, Avignon Way and Cardinal Creek.
- Arterial roads such as NE J Street and SE J Street, SE Moberly Lane, Water Tower Road, SW “I” Street, SE 28th Street, Elm Tree Road and Walton Boulevard.
- Collector Streets such as SW A Street, NW A Street and NE A Street, Central Avenue, Main Street, John Deshields Boulevard, NW 3rd Street, Tater Black Road, and SW Bright Road.
- Local Streets

NOTE:

The City does not provide snow or ice removal for private streets (indicated with blue street signs) or State Highways such as Hwy 102, Hwy 72, Hwy 12 and Hwy 112.
